▷ Education

BS in Data Science (4th Semester, In Progress)

Institute of Management Sciences, Peshawar

CGPA: 3.20

HSSC (2023)

Tatara Model College, Landikotal, Khyber

Obtained 930 marks out of 1100 – 84.5%

SSC (2021)

Tatara Public High School, Landikotal, Khyber

Obtained 1074 marks out of 1100 – 97.6%

▷ Research Interests

Machine Learning, Computer Vision, Data Science.

▷ Experience

AI/ML Engineering Intern

DeveloppersHub Corporation

2026 (2–3 Months)

- **Iris Dataset Exploration:** Performed exploratory data analysis and statistical summarization using `pandas`; visualized feature relationships with `seaborn` and `matplotlib` (pairplots, boxplots).
- **Stock Price Prediction:** Fetched historical market data via the `yfinance` API, engineered features from Open/High/Low/Volume, and trained a Linear Regression model to predict next-day closing prices.
- **Heart Disease Prediction:** Cleaned and preprocessed medical data, then built a Logistic Regression classifier evaluated using a confusion matrix and ROC-AUC score.
- **Telco Customer Churn Pipeline:** Designed and implemented an end-to-end machine learning pipeline for predicting customer churn from telecom subscriber data.

▷ Academic Projects

VitalTrack – Health Monitoring Web Platform

- Co-developed a full-stack health monitoring platform using React.js, FastAPI, and PostgreSQL under faculty supervision; contributed to backend setup and Alembic database migrations.

CampusEats Analytics & Prediction System

- Built a data engineering and ML project simulating food-ordering data across three Pakistani universities; implemented a Random Forest prediction model, anomaly detection, a recommendation engine, and a Plotly-based geo-comparison map using SQLite and Streamlit.

▷ Skills

Programming Languages: Python, C++, SQL

Data Science / ML Libraries: Pandas, NumPy, Seaborn, Matplotlib, Scikit-learn, OpenCV

Tools: Power BI

Concepts: Data Analysis with Python, Database Design
